DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims are rejected under 35 U.S.C. 102(b) as being anticipated by Teggatz et al (5,424,669).

Claim 1, Teggatz shows a control stage (21, 23) that generates a control signal indicative of whether power consumption by the integrated circuit needs to be reduced; and

A counter stage (35-41 and col. 3, line 25) that inputs the control signal and generates a plurality of sequential signals to a plurality of transistors (27-33), wherein the plurality of transistors source current from a power supply (VDD).

Claims 2-3, Teggatz shows the counter stage sequentially disables/enables the plurality of transistors.

Claim 4, Teggatz shows the plurality of transistors are a n-type transistor.

The limitations of claim 5 are rejected as above and the control circuit figure 2 as a microprocessor.

Claims 6-10, Teggatz shows the counter stage (35-41) and a plurality of transistor (27-33) connected to power (VDD) and ground (GND).
